

UCSF's Program on Reproductive Health and the Environment & the Environmental Health Initiative present...

# Late Lessons from Early Warnings

## A Seminar with David Gee

Program on Reproductive Health and the Environment

Environmental Health Initiative

**Monday,  
May 9, 2016**

Talk 2:00-3:15 p.m.  
Reception 3:15-4:00 p.m.  
Networking 4:00-5:00 p.m.

Byers Auditorium  
UCSF Mission Bay Campus  
Genentech Hall  
600 16th Street  
San Francisco, California

### David Gee

David Gee, Past Senior Advisor on Science, Policy, and Emerging Issues for the European Environment Agency, will present "Late Lessons from Early Warnings", based on a series of publications addressing the health costs of action and inaction on threats to environmental health.

Clinicians, public policy makers, public health officials, and the public are faced every day with decisions about threats to human health. "Late Lessons from Early Warnings", published by the European Environment Agency, grapples with the health costs of such decision-making head on using historical hazards, such as the Minamata mercury poisoning and leaded gas, as well as emerging issues, such as radiation from mobile phones and neonicotinoid pesticides. The lecture will resonate with contemporary decision-making, i.e., lead poisoning in Flint, Michigan, and toxic chemicals in consumer products and our food supply, and offer a pathway forward for taking action on what we know now to prevent harm to human health now and for future generations.

*Opening Remarks by*  
Daniel Lowenstein, MD

*Event Co-Chairs*  
Tracey Woodruff, PhD  
Diana Laird, PhD
