

**Joint UCSF Center for Tobacco Control Research & Education (CTCRE) and
Environmental Research and Translation (EaRTH) Center
Postdoctoral Fellowships in Industry Influence on Health**

**Academic Background Required:
Doctorate/Equivalent Degree (PhD, DrPH, MD, DDS, JD)**

New Fellows may implement Hybrid work schedules while in the San Francisco Bay Area. This fellowship allows for 2 days working from home and 3 days working onsite at UCSF.

This unique fellowship will provide funding to work with both the UCSF Center for Tobacco Control Research & Education and the UCSF Center to End Corporate Harm through the Tobacco Center's NIH funded fellowship program.

The purpose of the fellowship is:

- To prepare individuals from a wide variety of backgrounds in medical, biological, social, behavioral, and policy sciences to join the next generation of academic leaders in climate change and tobacco control.
- Upon completion of training, fellows will be well positioned to be active participants in crucial policy debates about the future development and implementation of fossil-fuel related interventions, informed by lessons learned from understanding tobacco industry strategies and tobacco control.
- Reference our fellows' alumni status: <https://tobacco.ucsf.edu/alumni>

The fellowship supports postdoctoral training:

- Our program stresses the skills needed to conduct research in diverse, collaborative transdisciplinary settings.
- We emphasize leadership in catalyzing the integration of multiple disciplines and translating science to policy and clinical practice.
- Postdoctoral fellows will have exposure to diverse training, including both didactic coursework and individualized mentoring to build a personalized research program.

Prior research experience in this areas is relevant, but not necessary for acceptance. Fellows have come from medicine, public health, nursing, economics, anthropology, geography, political science, law, communications, sociology, psychology, cell biology and other disciplines.

The goal of this fellowship is to work with the UCSF Industry Documents Library (REF) on a project to evaluate cross-industry collaboration, particularly related to fossil fuel and tobacco, (e.g. follow up on work related to risk factors for breast cancer). The fellow will be part of the Tobacco Control fellowship program and can be mentored by faculty affiliated with either the CTCRE or the EaRTH centers. All fellows have two mentors from different disciplines.

UCSF is a global leader in health sciences. We offer individual mentorship with UCSF faculty along with courses in **industry specific topics:** health policy, cancer control and prevention, grant and scientific writing skills, career development, interdisciplinary research, and biostatistics. We place a high priority on developing a fellowship program that reflects the diverse communities we serve. We encourage qualified applicants from all backgrounds to apply.

**Postdoc fellows receive an annual salary, commensurate with experience, of approximately:
\$60,000 - \$72,000.**
